

**MAI Consulting Seeking China-experienced Chemical Engineer
in Pharma/Vaccine Industry**

My consulting company has a project in China and we are looking for people with the right background to fill this position. Please pass this along to the membership or within your network.

We are looking for a process engineer with the following background:

- Speak and write English and Mandarin
- Chemical Engineering degree plus 3-5 years of work experience in the pharma/vaccine industry.

Responsibilities include:

- Develop project plans
- Develop equipment qualification and process validation protocols under the guidance of the Engineering Manager
- Assist on the execution of equipment qualification and process validation protocols
- Evaluate process cycle times, yields, shift patterns, etc.
- Identify maximum capacity and limiting steps
- Compile process and capacity information
- Develop capacity manuals
- Provide technical translation of protocols for both equipment and process validations

Background

This is a 6-month assignment with possibility of extension. The project is located in Hangzhou with a start date in mid-December
